DETAILED ACTION

Claim Objections

Claims 4-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should not depend on other multiple dependent claims. See MPEP § 608.01(n).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for using a catalyst comprising carbides or oxycarbides of a transition element for production of nonaromatic C-C double or triple bond from another compound or a mixture of other compounds having a nonaromatic C-C double or triple bond by metathesis reaction, does not reasonably provide enablement for using the same catalyst for other reactions such as isomerization and dehydrogenation. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The process of claim 1 is a process of production of a non-aromatic double-bond or triple-bond compound. However, there is nothing recited in the body of the claim to indicate which product and how the product is produced from the reactant.
